

ROTATING WIRELESS DR TRAY WITH CABINET

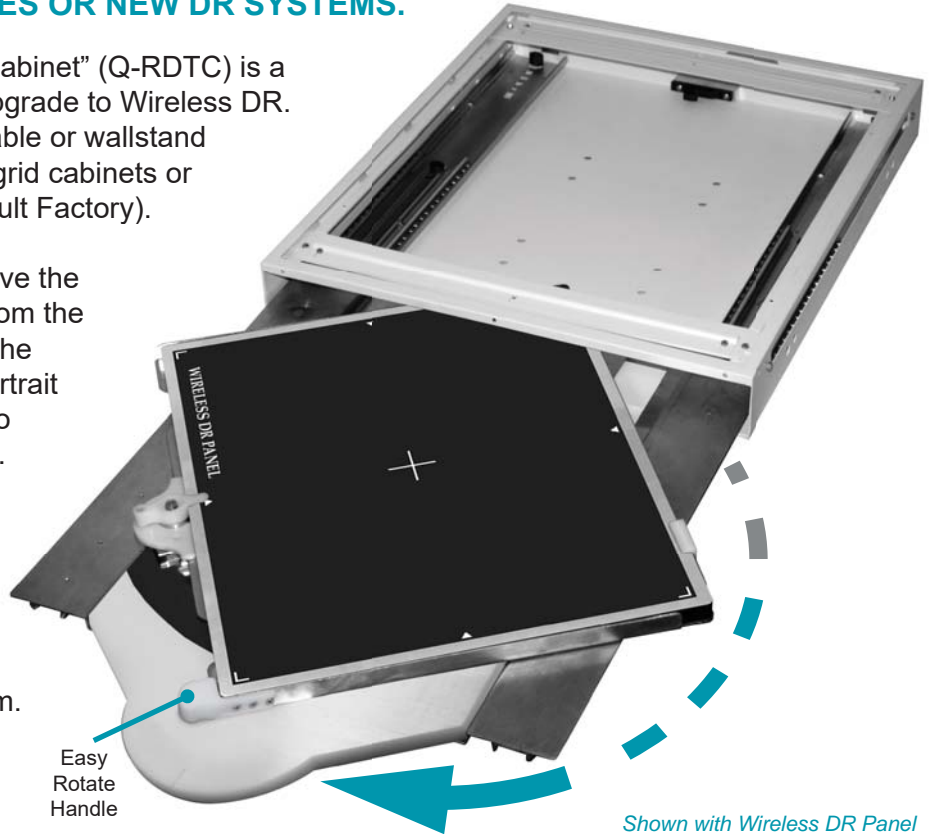

DESIGNED FOR USE IN RADIOGRAPHIC TABLES AND WALL STANDS

A SIMPLE CHOICE FOR FIELD UPGRADES OR NEW DR SYSTEMS.

The QUEST Rotating “Wireless DR Tray with Cabinet” (Q-RDTC) is a great addition to an X-Ray system looking to upgrade to Wireless DR. It is designed for easy upgrade to an existing table or wallstand applications that currently have standard style grid cabinets or Bucky’s (ie: Midwest, Progeny or Others *Consult Factory).

This rotational tray eliminates the need to remove the wireless digital 14x17 (35cmx43cm) receptor from the tray when changing orientation. A light pull by the receptor handle rotates the tray to either the portrait or landscape detent position without the need to physically remove the costly DR wireless panel.

The overall dimensions of the cabinet are the same as a standard grid cabinet. This allows the use of existing mounting hole dimensions & locations as well as the existing front panel (For Wallstands), grid and AEC chamber, which minimize any impact to the overall system.
